ABSTRACT:

PROBLEM TO BE SOLVED: To obtain the subject controller having excellently controlling effects on insect pests for clothing such as clothes moth, bisselliella Tinnneola bisselliella, etc., by making the controller include a specific pyrethroid-based compound and empenethrin.

SOLUTION: This composition comprises (A) a compound of the formula (X1 and X2 are each Cl or methyl [e.g. 2,3,5,6-tetrafluorobenzyl (+) 1R,3S-trans-2,2-dimethyl-3(2,2-dichlorovinyl)-cyclopropanecarboxylate, etc.], and (B) 1-ethynyl-2-methyl-2-pentenyl chrysanthemate (empenethrin). The controller contains preferably about 80 wt.% of the component A. A sublimable carrier such

as tricyclodecane, cyclododecane, trioxane, trimethylenenorbornene, etc., may be used instead of the component B and is mixed with the compound of the formula and used in the form of a sublimable solid agent.

ABSTRACTED-PUB-NO: JP2000355510A

BASIC-ABSTRACT:

NOVELTY - A pesticidal composition for clothes contains mixture of benzene derivative (I) with empenethrin.

DETAILED DESCRIPTION - A pesticidal composition contains mixture of compound of formula (I) with 1-ethinyl-2-methyl-2-pentenyl chrysanthemate (empenthin).

X1, X2 = Cl and/or methyl.

INDEPENDENT CLAIMS are also included for:

- (1) pesticidal composition for clothes containing mixture of compound (I) with sublimatory carrier to assume the form of sublimatory solid; and
- (2) furniture materials allowed to retain (I).

ACTIVITY - Insecticidal.

MECHANISM OF ACTION - None given.

USE - This invention is useful for controlling cloth pests, especially cloth moths.

ADVANTAGE - Insecticidally active (I), with low toxicity, is long-term gasifiable compared with conventional pyrethroid compounds. Its use with empenethrin or with sublimatory carrier, or the immersion of furniture materials in it, to allow its retention effectively controls cloth moths.
